

Slimline Flexible Bollard

Slimline Flexible Bollard is an all new Impact Resistant bollard that provides an attractive solution in the design of warning bollards and Keep Left signs. Easily installed and highly durable, Slimline Flexible Bollard is fully tested to EN12767 and is also certified to meet the requirements of BS8442 Section 14.3.

Slimline Flexible Bollard enhances motorist & cyclists safety and provide a cost-effective solution to sign damage due to vehicle impact. They are ideal for locations where there is a high probability of vehicle impact - such as splitter islands at roundabouts, Traffic Calming schemes, car parks, footpaths, cycletracks etc. Their ergonomic design means they are ideal for urban areas, town centres etc. Slimline Flexible Bollard also saves money by reducing the number of sign replacements required caused by vehicle collisions - while allowing the sign to perform 24/7 as a road safety device.

Slimline Flexible Bollard is faced with Crystal Grade Microprismatic fluorescent yellow reflective sheeting. This grade provides superior daytime visibility and excellent nighttime reflective qualities for the motorist.

Slimline Flexible Bollard - Key Features
